

CC300 Electronic Catheter Cabinet

Storage that's Flexible. Secure. Customizable.

S&S X-Ray offers a hospital grade cabinet optimized for secure catheter storage.

This fully networkable cabinet features password protection and electronic locking.

Retrieve items by entering a user-defined login and password. Utilize barcode or magnetic stripe readers to read existing staff badges to streamline user logins.

Accessibility: Hook-mounted slides provide hanging catheters extension out of the cabinet for ease of retrieval and restocking. Slides are laterally positionable to allow for larger packaging. Door and drawers are secured with individually controlled electronic locks. Drawers or optional plastic bins can store pharmaceuticals, contrast media, syringes, and other small items.

Accountability: Data logs consisting of date and time cabinet was accessed, user who opened the cabinet, and time the cabinet was closed provides an automatic audit trail.

Maintain Inventory: Customized inventory reports can be automatically emailed including information such as: cabinet access, inventory levels, and cabinet status issues, etc. for one or multiple cabinets throughout the facility.

Track Stock Usage: Details on items removed from the cabinet with associated patient use can similarly be tracked when data is captured using the optional bar code scanner or RFID scanner. Additionally, this information is transmittable to hospital inventory tracking and billing systems.

Features:

- Steel construction
- Password protection
- Electronic locking system
- Manual key override
