

WALL CASSETTE HOLDERS

FOR USE WITH NON-PBL SYSTEMS *

EXTRA HEAVY DUTY
COUNTERBALANCED - ONE HAND OPERATION
ADJUSTABLE FOR CASSETTE SIZES UP TO 14"x17" OR 14"x36"
LOAD FROM EITHER SIDE

These Extra Heavy Duty deluxe cassette holders are designed to accommodate any size cassette up to 14"x17" (222070) or 14"x36" (222070M)

Simple, durable and cost effective, these wall cassette holders are certified for use in general purpose x-ray rooms that **do not have PBL** (positive beam limitation) capability.

Heavy duty box girder construction is used for the cassette holder carriages and the top wall mounting bracket.

Heavy gauge chrome plated steel tubes provide a smooth non-binding surface for the nylon carriage bearings. Constant torque counterbalancing springs allow effortless vertical movement. The dual locking system enables the operator to adjust the vertical positioning of the cassette carriage with one hand from either side of the patient.

Both models are equipped with adjustable grid channels to accept a stationary grid.

The 222070 has a maximum vertical travel of 47" when a 14"x17" cassette is used and the 222070M has a maximum vertical travel of 28" when a 14"x36" cassette is used.

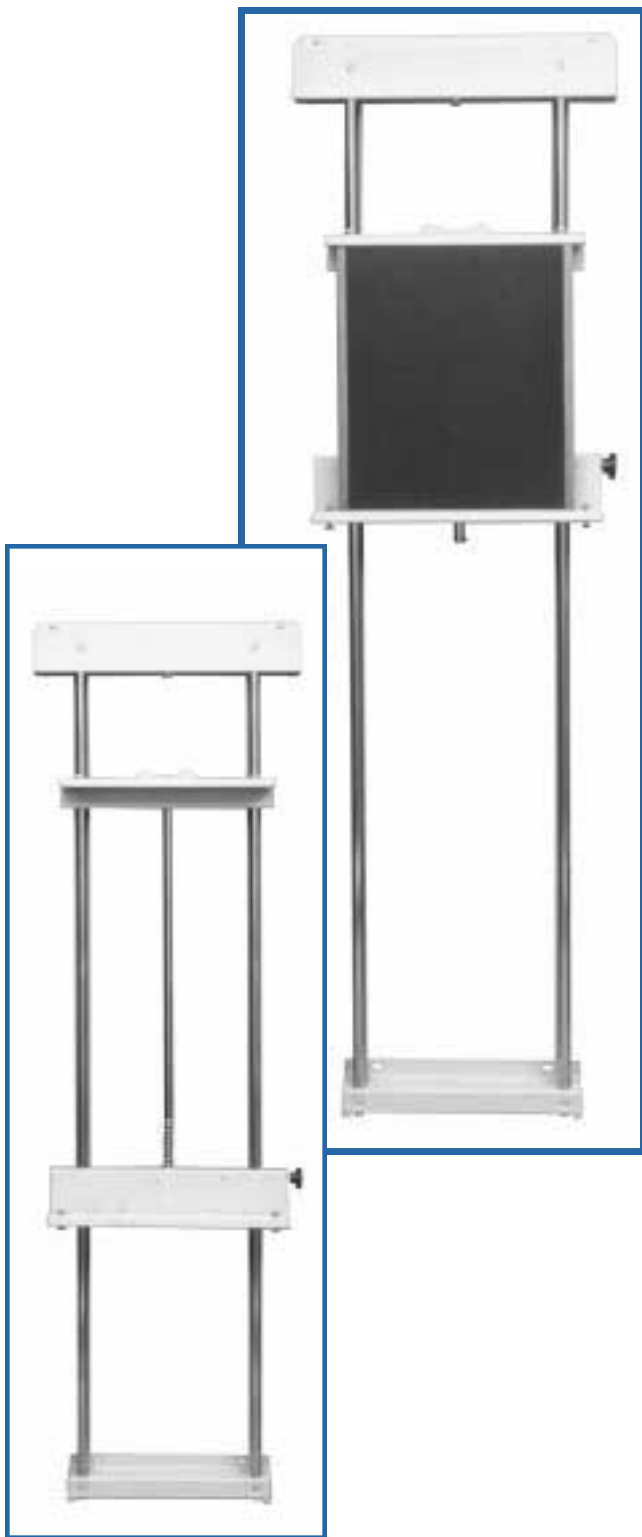

*** Important Note:**
REGULATIONS REQUIRE THAT THESE CASSETTE HOLDERS BE REMOVED FROM SERVICE SHOULD PBL BE ADDED TO SYSTEM AT A LATER DATE.

Finish: light grey baked enamel with chrome plated steel tubes.
